

Ayush Kumar

Computer Science Undergraduate

Motivated Computer Science undergraduate with hands-on experience in Python, Machine Learning, and SQL. Skilled in building end-to-end ML models and deploying Streamlit-based web applications. Strong foundation in data preprocessing, model evaluation, and backend development.

EDUCATION

B.Tech

IK Gujral Punjab Technical University

08/2021 - 07/2025

12 th

Vandana International School (CBSE)

07/2020 - 07/2021

10 th

Shiksha Bharti Public School (CBSE)

04/2018 - 07/2019

WORK EXPERIENCE

Python & ML Intern

Yoshop

06/2025 - 08/2025

Achievements/Tasks

- Built and evaluated ML models for prediction tasks.
- Performed data preprocessing, feature engineering, and visualization using Pandas, NumPy, and Scikit-learn.

Python Trainee

Grass Solution

06/2023 - 08/2023

Achievements/Tasks

- Learned Python OOP concepts and Flask backend development.
- Built REST APIs with authentication and database integration.

Trainee

DUCAT

03/2025

Achievements/Tasks

- Practiced ML workflow including data preprocessing, training and evaluation.
- Worked with MySQL for writing and optimizing database queries.
- Gained exposure of model deployment and integration with real-world application.

SKILLS

Python

C

C++

Pandas

NumPy

Matplotlib

Scikit-learn

TensorFlow

Open CV

Machine Learning (Supervised, Unsupervised, Reinforcement)

Data Cleaning & Feature Engineering

Flask

Streamlit

MySQL

OOPs

PHP

HTML

CSS

PERSONAL PROJECTS

• Heart Disease Prediction Model

- Built an intelligent, user-interactive web application using Python, Scikit-learn, and Streamlit to predict the risk of heart disease from medical data. Engineered features from health indicators and trained classification models for accurate diagnosis.
- **Libraries & Tools :** Python, Scikit-learn, Streamlit, Pandas, NumPy, Matplotlib, VS Code, Google Collab

• Face Detection System

- This project involves developing a computer vision-based video processing application using Python and OpenCV. It captures and processes live or recorded video streams, applying real-time frame handling and timestamping techniques. The project demonstrates practical skills in video analysis, OpenCV libraries, and basic automation for vision-based applications.
- **Libraries & Tools :** Python, Scikit-learn, Streamlit, Pandas, NumPy, Open CV, Matplotlib, VS Code, Google Collab

• Movie Recommended System

- This project focuses on developing a content-based movie recommendation system using Python and machine learning techniques. It processes movie metadata such as genres, descriptions, and other attributes to identify similarities between movies. Based on these similarities, the system provides personalized movie recommendations to enhance user experience.
- **Libraries & Tools :** Python, Scikit-learn, Streamlit, Pandas, NumPy, Matplotlib, VS Code, Google Collab
